How to read this excerpt

This new portfolio excerpt reproduces a row from the project's statewide export. It is not an original district statement of impact.

The estimate associates district funding and attendance inputs with reported charter transfers. It does not measure recoverable savings or guarantee that every estimated dollar would return if students transferred back.

The full project spans five years and 1,023 districts. This 2023-24 export contains 1,020 district rows; the two counts describe different populations.
